PROFESSIONAL SUMMARY

Full-Stack Software Developer with hands-on experience building and shipping web applications using Vue.js/Nuxt.js, NestJS, and the Shopify API. Comfortable across the stack — responsive frontends, REST APIs, and webhook-driven backends — with a working foundation in AI/ML integration (LLM APIs, computer vision). Focused on writing reliable, maintainable code and turning product requirements into clean, usable features.

EDUCATION

University School of Automation and Robotics, GGSIPU EDC *Nov 2022 – May 2026*
Bachelor of Technology in Artificial Intelligence & Data Science • CGPA: 8.7/10.0 *Delhi, India*
Coursework: Data Structures & Algorithms, DBMS, Machine Learning, Artificial Intelligence, Computer Vision, Big Data Analysis

EXPERIENCE

BitQit Pvt Ltd *May 2026 – Present*
Associate Software Developer *Delhi, India*

- Contribute to full-stack development of **Sparq**, a Shopify smart-filtering app, building and improving features across the Vue.js/Nuxt.js frontend and the backend API integrated with the Shopify API.
- Implemented the app's migration from permanent to **Shopify's expiring offline access tokens** across the NestJS and legacy Koa backends: 1-hour access tokens refreshed automatically with 90-day refresh tokens, a cron job that rotates tokens before they lapse, and Slack alerts for failed rotations.
- Built **bullmq-groups**, an in-house proof of concept replacing BullMQ Pro's paid groups feature: per-shop job concurrency using Redis and Lua scripts, with a reconciler that recovers slots after worker crashes.
- Helped build merchant-facing dashboard features that surface search and engagement analytics (searches, click-through, conversion).
- Worked on the **Sparq demo app on Shopify**, used to showcase the app's smart-filtering and merchandising capabilities to merchants.
- Contributed to bug fixes and reliability improvements across the Shopify embedded-app codebase and webhooks.

Prodigal AI *July – August 2025*
Software Engineering Intern *Delhi, India*

- Engineered a context-aware AI chat and document-summarization feature for an in-house messaging application by integrating the ChatGPT API.
- Designed prompt pipelines that translate complex technical jargon into investor-friendly summaries from historical conversation data.

PROJECTS

QuantaLab – Stock Market Simulation Tool
Tech: Python, yfinance, ML, Matplotlib • github.com/MrParindiyal/quantalab

- Built a virtual trading platform where users buy and sell stocks against real-time market data with simulated capital.
- Processed and validated **5 years** of historical stock data (via yfinance) to analyze trends and train predictive models.
- Implemented strategy backtesting and built dashboards visualizing portfolio performance and trading insights.

Laser-Based Weed Detection and Removal System
Tech: Python, PyTorch, OpenCV, UNet (RGB + NIR) • github.com/SauravChauhan666/Laser-based-weed-detection

- Designed an automated precision-agriculture system that detects weeds among crops via semantic segmentation (UNet) on RGB + NIR imagery, achieving **~90% segmentation accuracy**.
- Built a real-time inference pipeline with OpenCV + PyTorch to classify weed vs. crop regions.
- Integrated a laser-based removal mechanism that targets weeds precisely, reducing herbicide dependency.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Frontend: Vue.js, Nuxt.js, React, HTML, CSS

Backend: NestJS, REST APIs, Shopify API, Webhooks

Databases: MySQL, SQLite

AI/ML: PyTorch, TensorFlow, Scikit-learn, OpenCV, LLM API integration, Claude Code, Pandas, NumPy

Tools & DevOps: Git, GitHub, Docker, CI/CD, Linux/Unix

Key Concepts: Data Structures & Algorithms, OOP, REST API Design, Machine Learning, Computer Vision

ACHIEVEMENTS & CERTIFICATIONS

IBM SkillsBuild Summer Internship Program — AI Agent Architect, 2025
